

# SB-BACIPRO

Bacitracin Methylene Disalicylate 10%  
Poultry Feed Additive

*Supporting Poultry  
Health and Performance*

## Product Description

"SB-BACIPRO is a white or off-white powdered feed supplement containing ~ 10% of Bacitracin Methyl Disalicylate (BMD)". It is a free-flowing stable granule that ensures proper dosage, when added to poultry feed,

SB-BACIPRO (10%) improves digestion helps prevent Salmonella enteritidis (SE) colonization, and treats current infections. Bacitracin Methylene Di-salicylate (Bacitracin or BMD) is a polypeptide antibiotic. SB-BACIPRO is a fermentation product of natural microbial source Bacillus Sp., used as poultry/animal medicine (Veterinary product).

SB-BACIPRO is considered as antibiotic growth promoter (AGP) and also used to treat and prevent necrotic enteritis caused by Clostridium perfringens, which is a cause of significant economic loss in the poultry industry (1),

# SB-BACIPRO

Bacitracin Methylene Disalicylate 10%  
Poultry Feed Additive

## Safety

SB-BACIPRO (10%) is a safe medicine used to prevent necrotic enteritis. Scientific literature and practices recommended to use of BMD as a growth-promoter which helps to improve gut and body weight in birds. The SB-BACIPRO primarily acts on bacteria in the gastrointestinal (GI) tract of the animals through delivery as a feed additive. According to the FAO-National Office of Animal Health (NOAH, 2001), antibiotic growth promoters (AGP) are used to "help growing animals digest their food more efficiently, get maximum benefit from it and allow them to develop into strong and healthy individuals".

## Key Advantages

Administering prescribed doses of SB-BACIPRO to chickens enhanced their overall health. This was evidenced by increased intestinal villus height, and improved nutrient absorption, leading to higher body weight and better feed conversion efficiency (FCR) (2),

Antibiotics have traditionally been used in livestock, including broiler chickens, to treat diseases and promote growth by increasing weight gain and feed efficiency. Bacitracin methylene di-salicylate (BMD) is a commonly used antibiotic for growth promotion in the poultry industry (3). SB-BACIPRO reduces subclinical and clinical disease, resulting in greater productivity and decreased morbidity/mortality.

## "How SB-BACIPRO works?"

Compared to other growth-promoting antibiotics, SB-BACIPRO targets primarily gram-positive bacteria, including Streptococci, Staphylococci, Clostridia, Fusobacterium, and Actinomyces. BMD interferes with protein synthesis and cell wall production and induces cell lysis in these microorganisms (4)

## RECOMMENDED USAGE/DOSAGE (for 1 Ton feed):

For Broilers: 200-250 grams per ton of feed; For Layers: 500 grams per ton of feed;

## For Breeders

250-500 grams per ton of feed from the start of egg laying to the 42nd Week.

**Note:** Consult a veterinarian for proper dosage based on your specific flock needs.

## FOR BEST RESULTS

Add the SB-BACIPRO (10%) with feed at regular time intervals as prescribed by the veterinary consultant.

## WITHDRAWAL PERIOD

SB-BACIPRO (10%) is not absorbed from the intestinal tract. Hence there is No withdrawal period.

## STORAGE

Store at room temperature, and keep away from moisture.

## Caution

Not for Human Use; Avoid breathing directly; If skin irritation or a rash occurs : Get medical advice/attention.

Wear protective gloves/protective clothing/eye protection/face protection.

SB-BACIPRO Available forms: Granules/Powder
